

INSTALLATION GUIDE

Prior to the actual program installation, it is imperative that you install

Microsoft .NET Framework 4.

This is an upgrade developed by Microsoft, and the Framework software allows computers a much faster computer graphics generation that is also used in the Penn Elcom CaseDesigner software. Without this installation, the software will not work. On most modern computers (from Windows 7 onwards), Framework is already installed. If you are not sure whether it is installed on your computer, then simply proceed with an installation. This will not adversely affect your computer, but will also allow older computers the benefit of up-to-date graphics technology which is a requirement for 3D software. For all new software (from Windows 7 onwards), the .Net-Framework is a pre-requisite anyway. This software is provided free-of-charge by Microsoft and can be downloaded via the link below:

<http://www.microsoft.com/download/en/details.aspx?id=17718>

Only after installing Framework, proceed with downloading Penn Elcom CaseDesigner and start setup.exe.

Do not install the program in sub-folders "Programs", "Program Files" or "Program Files (x86)", but in the intended drive in an immediate sub-folder (we suggest: "C:\PE CaseDesinger"). In order to be able to run updates, it is this directory that **must** be used.

After the actual program installation, start the program and import the prices applicable to your company which may deviate from those specified in the installation.

In order to do this, save the enclosed price list file in the sub-directory "Updates" of the PECD program folder and select **OPTIONS ->PRICELIST-UPDATE** from the menu. Then click on "Import customer prices".
